

Yellow-E glass

SGG PLANITHERM® TOTAL

Which would you prefer?

SGG PLANITHERM® TOTAL

This high performance, durable low-E glass is considerably more neutral than traditional low-emissivity products, making it the clear choice.

SAINT-GOBAIN
GLASS

Why use SGG PLANITHERM glass instead of traditional thermally insulating glass?

SGG PLANITHERM is a high performance thermally insulating glass and gives:

- **Better thermal insulation** - reducing heat loss further, saving you even more money on heating bills.
- **More comfortable rooms** - better insulation means fewer cold spots and drafts near windows or doors.
- **Less condensation** - the inner surface of the glass stays warmer thereby reducing the likelihood of condensation.
- **Less of a tint to the glass** - this gives clearer vision through your windows and means your curtains or Georgian Bars do not look dirty or discoloured.
- **More light** - less tint also means more light can enter the room, making a more comfortable environment and reducing the need for extra lighting inside.
- **Less chance of 'haze' (dusty effect)** - this effect is more common with traditional types of thermally insulating glass due to the way it is manufactured.
- **Environmentally friendly** - less need for heating helps to reduce energy consumption.
- **Window Energy Rating** - SGG PLANITHERM TOTAL combines excellent thermal insulation with high solar heat gain, making it one of the most energy efficient products available under the BFRC Window Energy Rating scheme.
